CONSOLE

(INDIA) INC.

(Company Profile)

INTRODUCTION

In today's information age every enterprise need solutions which can help them accelerate their work process in a secure way and at the same time following all the standards and regulations.

Console (India) Inc. specializes in providing solutions in almost all verticals of IT. Starting from providing solutions in Network administration and management, Console (India) Inc. also provides solutions for data security and storage. Apart from these, Console (India) Inc. also provide software solutions, website design and development and various multimedia solutions starting from branding an enterprise to multimedia presentations to assist them in their daily routine activities and procuring new business.

Our highly qualified staffs are continuously trained in today's evolving standards, platforms and technologies. Their technical expertise and dedication to quality has enabled companies of all sizes to leverage the strategic, tactical and financial benefits of outsourcing their most demanding requirements to Console (India) Inc.

We continuously strive to be our customer's Preferred Partner for providing solutions for their requirements and we guarantee your satisfaction! Our goal is to develop a long term and mutually beneficial partnerships with progressive companies who demand the highest level of quality and professionalism.

OUR APPROACH

We believe in a customer-centric approach in delivering our goals. We use the Customer-Life Cycle Adoption framework to suggest right offering at the right stage to each of our customer, based on vertical and size, delivered in partnership with system integrator of your choice.

Apart from these we also provide value added services like consulting, auditing, compliance and deployment of the work is done based on the feedbacks and results that we get from these services.

OUR SERVICES

Console (India) Inc. is a leading provider of integrated solutions for the design, upgrade and expansion of business networks. Console India Inc.'s infrastructure solutions consolidate and optimize IT resources, improving clients' business productivity by providing high quality and high performance.

We expertise in:

- Console Thin Client solution
- Advanced IP routing and switching
- Network Management
- CCTV camera
- Video conferencing
- UTM or firewall security
- LAN and WAN connectivity (network cabling, wireless connectivity)
- Wi-Fi solution
- Computer Application installation and support
- Fiber optics
- Customize Software solution
- Website development / Branding
- 3d walk through
- Flash/ PPT Presentation
- TDL solution
- Server solution
- Anti-virus Solutions
- Mail server Solutions
- Storage Server Solutions
- RDP Solutions
- Mail Security/ Web Security / Network Security
- Bandwidth management
- Data backup/ recovery solutions
- VPN Solutions

Console Thin Client solution

Consol (India) Inc. presents a own made and new quality of thin client solutions for every organization. Our thin client concept is very new and it has a very good speed capacity for the clients.

Basically the thin client is client- server architecture that connects users to server, where applications and data are stored and processed. Instead of running applications locally on each individual PC, the application is run centrally on the server and viewed locally on individual terminals.

Thin Clients are also known as Diskless PCs, Dumb Terminals, Lean Clients, Terminal Services Client, Thin PC, etc. while the technology has also been referred to as Diskless Computing, Server Based Computing, Remote Computing, Remote Desktop Computing, etc.

Advanced IP routing and switching

Service providers are experiencing intensifying demand for IP services as businesses seek to boost productivity through information technology. One IP service of particular interest to service providers' corporate customers is IP-enabled "virtual" private network service (often abbreviated as IP-VPN service). With IP-VPN, a service provider connects two IP addresses located at geographically dispersed sites. These two locations thus appear to be within a private IP network. The customer experiences a private network service that connects its remote sites, even though traffic actually flows though a shared provider infrastructure. The benefits of this "virtual" connection include greater reliability for the customer and better resource utilization for the service provider. In its simplest form, IP enabled means to seamlessly connect sites over the underlying provider network without the need for the customer to create IP connectivity between sites. Note, however, that IP enabled does not mean that the provider's underlying transport technology is router-based only indeed it can, and often will, include technologies such as Asynchronous Transfer Mode (ATM).

Network Management

Console (India) Inc. specializes in the design, installation, administration and support of Local Area Networks (LANS), Wide Area Networks (WANS) and wireless setup (Wi-Fi) based on Microsoft's Windows 2008\2003\2000\XP\NT and Linux Network operating systems.

CCTV camera

Console (India) Inc. is a leading company in providing the world class video surveillance systems. The company offer a complete end-to-end video surveillance solution from traditional analog camera based solutions to high-end IP camera based solutions.

CCTV Monitoring Systems in today's scenario changes technological advancements in the field of computers and communication have opened up a new world of CCTV remote surveillance and CCTV security solutions that protect people and property, reduce crime, and improve crime detection. Hi-Tech CCTV Monitoring provides cctv monitoring solutions, cctv remote monitoring, remote access control and critical asset remote monitoring services for commercial, industrial and residential premises.

The Solutions being offered For Video Surveillance are:

- CCTV based Video surveillance for in building surveillance to serve the SMBs and corporate sectors
- City-wide video surveillance for large corporate on Wide Area Network
- Wireless Video Surveillance for large and strategic installation
- Customized surveillance solutions to meet the security requirements of the customers

Video Conferencing

The advantages of video conferencing are far super ceding the advantages of business travel as of late, which is why we are seeing so many companies these days using video conferences instead of paying the high travel expenses of sending their employees on trips all over the world. And don't be fooled into thinking that it is only high powered law firms or doctors associations that use this new type of software. It has widespread use among a very diverse collection of professionals.

Console India Inc's video conferencing solutions encompass a range of offerings to meet the needs of professionals and educators seeking to bring advanced technology to their environments. Console India Inc's conference room solutions are designed for optimal face-to-face communications and enhance the experience of meeting over video conferencing such that each meeting is seamless and integrated.

All of Console India Inc's solutions include high quality cameras and systems that are fully standards-based, easy-to-use, and are controlled with an ergonomically designed remote control. Combine these systems with any of the attractive, functional, and versatile cart/display options for a complete turn-key video conferencing solution.
It is based on years of experience designing IP based conferencing solutions from the ground up and includes the powerful combination of hardware based servers to support media processing for advanced room system devices and software servers to support the need for high scalability and distributed processing for the desktop and mobile markets.

Console India Inc. provides the best multi-party web video conferencing software solutions using standard PCs, Internet connections, and widely available PC video peripherals. Today We offer Telepresence quality with web conferencing convenience. Our complete range of audio and Video Conferencing Solutions are hardware independent, unlike the traditional hardware video conferencing from Sony, Polycom, Tandberg, Lifesize etc which work mostly with Expensive proprietary hardware products only. Console India Inc.'s easy to use and set up Video conferencing will get you started immediately without the high infrastructure costs and time.

UTM/ Firewall Security

Console (India) Inc. presents various range of firewall protection for every organization for the internet as well as intranet security. Internet has become a integral part of every organization whether small business or distributed enterprises and there is a heavy reliance on internet as it is used to connect remote offices, business applications, information sharing, VOIP and email access. There is an ever growing threat coming from spy ware, instant messaging, peer-to-peer, rouge applications, non work related websites which undermines an organizations security and productivity.

Enterprises are increasingly being targeted by both external and internal threats. Spyware, phishing, pharming, viruses and more are targeting the individual user for confidential information. In addition, insiders are compromising enterprise security out of ignorance or malicious intent. Our security solutions help organizations close the existing gaps in their security infrastructure through proactive threat management with user identity-based controls. This leads to a safer business environment yielding high productivity.

Our UTM protect organizations against user-targeted external and internal threats through tightly integrated solutions over a single platform: Stateful Inspection Firewall, VPN (SSL VPN & IPSec), Gateway Antivirus and Anti-Spyware, Gateway Anti-spam, Intrusion Prevention System (IPS), Content & Application Filtering, Bandwidth Management, Multiple Link Management , wan failover, user wise security or IP wise security, protection from hackers or crackers and good quality On-Appliance Reporting. Now we are presenting VPNC-certified UTM for WAN connectivity (Remote connectivity, connectivity between head office to branch offices, branch office to branch office, mobile connectivity etc.) for any organization.

In an increasingly mobile and open business world, organizations are required to enable secure remote access to road warriors and telecommuters anywhere and over any device while opening corporate extranets and more to partners and customers. In addition, they require secure and high-speed connectivity between branch offices, remote locations and the central office.

LAN/ WAN Connectivity

Console India Inc is focused innovative technology products coupled with efficient Service. We provide Computer Networking Solutions including implementation of LAN & WAN Connectivity using CISCO, Nortel, Avaya, and 3com, Amp, Dlink, Apcom (DAX) & HCL Active Network products like Switches, Routers, Firewalls and Wireless Access Point Security Switches & Power over Ethernet Switches.

Wireless local area network (WLAN) links two or more devices using some wireless distribution method and usually providing a connection through an access point to the wider internet. This gives users the mobility to move around within a local coverage area and still be connected to the network.

This expansive range of services helps us define, design and deliver on our promise. Our new Product Initiatives Team is focused on developing innovative products and solutions that better serve your business needs. Our product and solutions team are committed to helping you derive better value for your telecommunication spends. This focus on new product innovation, this constant endeavor to create new products and services based on customer feedback and understanding, has given us the edge. We offer the following services to choose from:

- System Installation & Maintenance
- LAN Installation & Maintenance
- Wireless LAN Installation & Maintenance

Wi-Fi Solutions

Console (India Inc.) presents wireless LAN setup or Wi-Fi zone setup. We have tie-up with the major market share device provider for wireless device at any range. The wireless technology provides maximum user mobility, flexible installation, a reduced cost of ownership, excellent scalability in supports additional PCs. The wireless LAN connect to other site of network at various speed.

Wi-Fi are sweeping through municipalities, campuses and enterprises of all sizes creating a buzz of excitement and anticipation unseen in the communications arena since the advent of the Internet. This disruptive technology offers exciting benefits for all.

For communities large and small Wi-Fi can help conquer the digital divide, encourage economic development, streamline public services and public safety and create a greater sense of community among residents.

The wireless LAN solution is the easiest alternative to a traditional wired network. When the wireless access point and bridge is connected to Ethernet backbone through an RJ-45 connector, the access point and bridge supports mobile users, temporary work sites, difficult to wire environments and remote access to corporate network data. For campuses and enterprises, Wi-Fi can improve productivity; promote communication, information sharing and collaboration; tighten security and increase safety; and improve employee and customer relations.

Our portfolio includes one of the most comprehensive Wi-Fi and Mesh Solutions available in the industry today. Our team of experts stands ready to assist you in effectively choosing the right technology for your application as well as delivering a comprehensive suite of services ranging from network design through installation, operation and management of your network.

Wireless Solution can be implemented:

- Point to Point Connectivity
- Point to Multipoint Connectivity
- Campus wide area distribution
- Wireless LAN Network
- Large campuses or premises extensions

Computer Application Installation and Support

Console India Inc. is a leading supplier of IT solutions to the Government, Education, Corporate and Health markets. We provide hardware and software solutions, design, install and support computer network solutions including wireless, internet and server. Our solid reputation has been forged by our after sales service and by providing our quality solutions on time and within budget. Our staffs are results driven and work closely with our customers to achieve their goals and exceed their expectations.

Services:

IT Consulting, Contracting and Facilities Management solutions on time and within budget. Our staffs are results driven and work closely with our customers to achieve. Read more about our services.

Products:

Famous for its high performance, high quality computer systems. Console India Inc. offers a wide range of IT products to customers of all industries and companies of all sizes.

Fiber Optics

Fiber optics is medium for telecommunication and networking because it is flexible and can be bundled as cables. It is especially advantageous for long-distance communications, because light propagates through the fiber with little attenuation compared to electrical cables. This allows long distances to be spanned with few repeaters. Many commercial and industrial environments present electrical noise and ground differential challenges, especially over long distances. Fiber optic links solve those problems, providing high bandwidth connections that are impervious to noise and ground differentials.

Console India inc. has fiber optic solutions that support point-to-point and networked systems. We also provide the couplers and cable assemblies needed to put the complete system together. Fiber infrastructure offers availability, scalability, and almost unlimited bandwidth Prices for fiber optic cable and transceivers have dropped significantly; currently, the difference between a fiber infrastructure and its copper counterpart doesn't exceed approx.10% and it is expected to soon disappear. Modular installations with less technical workmanship requirements will soon make the fiber infrastructure cheaper.

Customized Software

Console India Inc. offers a wide range of custom IT programming services. We have outstanding experience in custom database development, desktop and distributed application design as well as various custom software components and web-project programming.

We take all stages of the software development process seriously. Our primary goal is to meet all out customer needs and requirements as quickly as possible. This also includes daily, weekly and monthly reports on the project development status.

We believe that our high quality service provides a sound basis for a successful customer relationship. We consider the testing stage of the product to be one of the most important parts of the development process and we strive to exclude any errors before the product release milestone.

We use the latest software development platforms and tools to achieve this. We also employ the latest project management techniques and software engineering practices. With custom software solutions

that will help you to keep one step ahead your competitors by continuously improving your IT-based business solutions. We offer a wide range of custom web and software programming services in a variety of application. We offer a wide range of custom web and software programming services in a variety of application such as:

- Custom e-Commerce Solutions (B2B and B2C)
- Database Business Applications
- Distributed (client-server) applications
- Custom components and libraries (ActiveX controls, plug-ins, etc.)
- Internet/Intranet Applications
- Websites and web-tools

Website Development

Console (India) Inc. offers a complete package of affordable website design and development. From the initial process of taking inputs from clients, planning on the basis of such inputs to final implementation and testing – all are done using latest web site designing technique and skills.

Console (India) Inc. provides you with affordable website design and development services in a professional manner backed up with a top priority customer service. Every aspect of your website design and development - design, content creation and streamlining, programming to complete development, web site hosting is done a professional manner along with affordable web site design rates. It is absolutely essential that you have a website which can attract audience - that is intuitive, informative and efficient. It is also necessary that you have an affordable web site design and

TDL Solutions

TDL (Tally Definition Language) is the Software Development Kit of Tally Solutions. IT allows programmer to build complete solution and deploy with ease.

Our TDL Solutions enables:
- User defined printed formats
- Various types of columnar reports such as Batch-wise, Item Wise Report etc.
- Bar code and Label Printing
- There is auto-creation of transaction as required
- Facilities of customization of synchronization
- Modifying default Reports to alter required fields
- Modify the existing user entry screens as required

Server Solutions

Console India Inc. provides a full range of server solutions for the demands of enterprise environments from high performance compute to remote graphics rendering.

Servers is engineered for the enterprise with advanced reliability, availability, and serviceability features that are designed for scalability, performance and power efficiency.

Antivirus Solutions

For over the years, Console (India) Inc. has built a reputation on providing antivirus solutions. We provide cost effective solutions and services to meet today's demanding security needs. Our certified solution consultants and system engineers offer leading know-how to help choose the right solution to best fit your needs. Virus attacks and worms have create havoc in an enterprise. Heavy spam may lead to work hindrance and server downtime. Tackling this problem effectively is therefore very important if you want to maintain your enterprise efficiency. Our Antivirus Solutions are an apt answer to this problem. Our unified malware detection engine delivers complete protection against virus, spyware and adware, and controls VoIP, IM, P2P and removable storage.

Mail Server Solutions

Virus attacks and spam mails have created devastating effect to an enterprise. Heavy spam may lead to work hindrance and server downtime. Tackling this problem effectively is therefore very important if you want to maintain your enterprise efficiency. Our Enterprise Mailing Solutions are an apt answer to this problem.

Providing a range of mail-related services expected by organizations can be a daunting process. Our Enterprise mailing server Solution presents a comprehensive guide to manage the most important e-mail services .We assist in outlining the system and network preparation process geared towards running a complete enterprise e-mail system. With a nod to the global e-mail availability now required by many organizations, we also guide you through configuration of a web-based mail interface, mailing-list software, and advanced security and privacy topics.

Office Solution features and choices:

- SMTP / POP3 / IMAP servers.
- Built-in Webmail server Mailing List server
- Web administration console / Command Line Interface (CLI)
- Automatic Migration engine
- Antivirus & Anti Spam Support
- SMTP / POP3 / IMAP / Webmail proxies
- LDAP authentication & routing
- Backup & Restore service
- Reporting engine

Storage Server Solutions

Console (India) Inc. has provided personal and corporate customers quality custom computing solutions for more than a decade, and is at the forefront of disk-to-disk expandable storage technology. We offer a full spectrum of rack mount scalable storage servers for data backup, near line storage, media sharing storage, content creation, streaming media and post-production solutions.

RDP Solutions

Remote Desktop Services is formerly known as Terminal Services in Windows Server is one of the components of Microsoft Windows (both server and client versions) that allows a user to access applications and data on a remote computer over a network, using the Remote Desktop Protocol (RDP). Remote Desktop, allows a user to log in to a remote system and access the desktop, applications and data on the system as well as control it remotely. RDP, the Microsoft Remote Desktop Protocol is a multi-channel protocol that allows a user to connect to a computer running Microsoft Terminal Services. RDP is designed to support many different types of network topologies such as ISDN, POTS and many LAN protocols such as IPX, NetBIOS or TCP/IP. XP/VS Server is a cost effective multi-user Remote Desktop access solution for Windows using the standard Microsoft Remote Desktop Protocol (RDP).
Installing Our RDP Services allows an unlimited number of users to remotely access all their Windows Desktops and Applications simultaneously. Our RDP services are suitable for small and medium enterprises and offers premium support services.

Mail Security/ Web Security / Network Security

IT security breaches are major cause of concern for organizations these days. These breaches can lead to theft of data and money, trashing of the trust and brand reputation and total disruption of the key services. It is therefore imperative to invest in efficient security tools and processes. Most of the businesses are facing this threat on a daily basis. It has been observed that even minor breaches can lead to major losses. To tackle this threat, vigilance has to be maintained round the clock, which requires heavy investment in security tools and processes.

Email carries essential messages for the everyday workings of your business. But it's also a major conduit for security threats that blend web, email, and data attack strategies. You must have email security that's tightly integrated into your data loss prevention (DLP) technology. If you don't, you're losing data, inviting crime, risking compliance violations, and jeopardizing your reputation. We Provide email solution that unifies enterprise-class email, web, and data security. We Consolidates email, web, and data security in one solution – cutting your costs and simplifying management. Our Email solution automatically encrypts email before it is delivered to external recipients without requiring any additional desktop software or end-user action.

At Console (India) Inc., we know web security inside and out. Our solutions safeguard you with data loss prevention (DLP) right in the web security gateway, Real-time monitoring of social content 24/7 for the best possible protection, provision for automatic backup and a single, unified, powerful framework that allows you to grow, with integrated web, email, and data security for the best protection at the lowest

total cost. Our network management tools assist you in simplification, automation, and integration of the network to reduce the overall operational costs and improving productivity. Console(India)Inc. Services are based on proven methods and best practices through which they have been able to provide outsourced security management, monitoring, and response services to help you solve security problems cost-effectively.

Bandwidth management

Console (India) Inc. qualifies and recommends bandwidth and VoIP providers with direct connections between their networks. This means your voice packets don't bounce all over the Internet before reaching the telephone network, resulting in better call quality and reliability. Console (India) Inc.'s scalable, carrier-grade solutions provide the visibility, topology awareness, security, application control and subscriber management that are vital to managing Internet service delivery, enhancing user experience, containing operating costs, and maximizing revenue in broadband networks.

We keep network congestion under with unbreakable speed limits. We provide scalable architecture with automated load balancing, single point installation and class based filtering. Our advisors research your particular connectivity needs, then guide you to the technology and service provider(s) that suit you best.

Data backup/ recovery solutions

Backup solutions are data protection solutions that take care of data security problems. If your business requires business critical operations, requires weekly or daily backups is need of plug and play capability, requires simple and effective manageability and focuses on capacity, reliability, performance, and durability, then you need Console(India)Inc 's efficient backup solutions.

Console (India) Inc. is committed to working with enterprises, to bring its customers some of the very best data protection solutions. Our customers enjoy vast array of benefits, including special pricing, ongoing technical support and besides the quality of our software. Console (India) Inc. provides powerful, innovative data protection solutions for networked storage, delivering the deepest and broadest support for Linux operating systems. Console (India) Inc. delivers unique, top-of-the-line solutions for several distinct segments. Console (India) Inc. is focused on developing innovative data protection software tailored to Storage Administrators needs. Developing innovative data protection software is the sole focus of Console(India)Inc's development efforts, resulting in technically sophisticated products which are designed with Storage Administrators in mind reduce risks of data loss and manage storage infrastructure costs.

VPN Solutions

We at Console (India) Inc. provides services that can connect all of your computers and network resources through secure private networks over the Internet without dedicated hardware or additional IT infrastructure. It is easier to set up unlike traditional VPNs. It can be setup in minutes with no hardware required. It's a web based management which is deployed to anyone, can be managed from anywhere, can be accessed anytime. We provide embedded network security with encryption, access controls and configuration management.
